

Omnix — 30-day sales plan

Written 2026-07-01 by CTO. Turning a working four-module product into paying customers in 30 days. Nothing in here needs new code — every capability referenced is shipped and verified.

The situation

Justine has a working, KRA-compliant, offline-first POS at KES 30,000 one-time. Four variants for four verticals: **Dawa** (pharmacy), **Retail** (mini-marts, supermarkets, salons, spa, general trade), **Hospitality** (restaurants, bars, hotels, lodges), **Hardware** (hardware stores, contractors). Verified: auto-updater, licensing, payments end-to-end.

What's missing is outreach. The product is not the bottleneck; the phone is. This plan is 30 days of specific actions per module.

The four modules — how each one sells

Each module has a different buyer, a different pitch, and a different objection to overcome. Do not use the same script for a pharmacy owner as a restaurant manager — you'll lose both.

Dawa · Pharmacy

- **Buyer:** pharmacist-owner (often the technologist), age 30-55, licensed by Pharmacy & Poisons Board
- **Where they hang out:** WhatsApp groups ("Kenya Pharmacists", "Chemists Kenya"), Facebook (Nairobi Pharmacy Owners), pharmacy distributor loyalty programs
- **The hook:** KRA eTIMS from March 2026 audits, SHA insurance claim delays, batch expiry losses
- **The 30-second pitch (voice note):**
 > "Habari [Chemist Name], I'm Justine — I built pharmacy software specifically for Kenya. Auto-signs your eTIMS receipts, submits SHA claims, tracks batch expiry so you don't lose stock. KES 15,000 first week — no monthly fees. Free install by me. Can I show you Thursday?"
- **Killer demo moment:** ring up a sale 'M-Pesa STK' receipt print **KRA control number stamped**. Then dispense a prescription **amber batch-expiry warning** fires on an old batch.
- **Common objection:** "Loyverse works fine" ! "Does Loyverse file your eTIMS? Handle SHA claims? Warn on expiring dawa? Because from March 2026, missing eTIMS = KES 10,000 daily fine."
- **Sweet spot:** independent chemists (not chain outlets). 1-2 branches, KES 300k-2M/month revenue. Owner sits at the counter half the day.
- **First-customer target:** 2 in Week 1

Retail · Mini-marts, dukas, salons, spa, general trade

- **Buyer:** shop owner, often the till operator herself, age 25-60, may have a diploma or not
- **Where they hang out:** local M-Pesa agent lists, Facebook Marketplace groups, supplier delivery routes (Coca-Cola, Bidco, Kabras — the reps know every shop)
- **The hook:** M-Pesa reconciliation nightmare, stock loss to shoplifting, "I can't tell if I'm actually making money"
- **The 30-second pitch (voice note):**
 > "Habari [Owner name], I'm Justine — I built POS software for Kenyan shops. Works with your M-Pesa Till or Paystack, tracks every sale, tells you at close of day exactly what you made — cash, mpesa, credit.

KES 15,000 to install this week. No monthly fees. Can I stop by tomorrow?"

- **Killer demo moment:** at close of shift, hit "Close shift" !' screen shows exactly how much cash should be in the drawer, how much M-Pesa hit the Till, and any variance. Owner nods slowly.
- **Common objection:** "It's expensive" !' "You lose KES 800 a day on shrinkage right now — that's KES 24,000 a month. This pays back in 3 weeks."
- **Sweet spot:** mini-marts and dukas with 200-800 SKUs, KES 200k-1M/month revenue. Salon/spa owners who charge M-Pesa and don't reconcile.
- **First-customer target:** 3 in Week 2

Hospitality · Restaurants, bars, hotels, lodges

- **Buyer:** manager or chef-owner, age 30-50, comfortable with technology (they've been burned by cheap POS before)
- **Where they hang out:** Nairobi Restaurant Owners Facebook group, Airbnb Superhost communities, Zomato/Glovo delivery-partner WhatsApp channels
- **The hook:** split payments per table are painful, kitchen order tickets get lost, no way to track a bar tab across 3 rounds
- **The 30-second pitch (voice note):**
> "Habari [Restaurant Name], I'm Justine — I built restaurant POS software. Tables, KOT to the kitchen printer, split-bill payment (2 cash + 2 M-Pesa), and every eTIMS + SHIF receipt handled automatically. KES 15,000 install this week. Can I show you between lunch and dinner service on Thursday?"
- **Killer demo moment:** order at table 4 !' send to kitchen (KOT prints in "kitchen") !' close bill with 4 different M-Pesa Till numbers !' each customer gets their own eTIMS receipt.
- **Common objection:** "We're using [pen and paper / Excel]" !' "Ask your accountant how much time they spend cleaning up the receipt book each month. You're paying them KES 30,000/month for that. Automate it once."
- **Sweet spot:** single-location restaurant with 20-60 seats, 4-8 staff, KES 500k-3M/month. Coastal beach lodges (they don't get Nairobi-based sales calls).
- **First-customer target:** 2 in Week 3

Hardware · Hardware stores, building materials, contractors

- **Buyer:** shop owner, age 40-70, sceptical of software, best reached in person or through a supplier rep who already visits them
- **Where they hang out:** Kenya Hardware Owners' Association, Kambaa quarry co-op, cement distributor sales meetings, physical Enterprise Road / Industrial Area shops
- **The hook:** **bulk pricing tiers** are guessed at manually, quotes take 30 min to write, contractor accounts are on scraps of paper, invoices get lost
- **The 30-second pitch (in person or WhatsApp voice):**
> "Habari mzee, I'm Justine — I built software for hardware shops. Bulk pricing per customer type, quotes !' convert to invoice in one click, contractor account tracking, delivery notes with signatures. KES 15,000 install this week. Free install by me — I'll come to your shop Thursday and set it up in 45 minutes."
- **Killer demo moment:** contractor walks in for 50 bags of cement !' search "cement 50kg" !' system auto-applies contractor pricing !' generate quote !' convert to invoice !' print delivery note. All in 40 seconds.
- **Common objection:** "My son handles the books" !' "Bring him in. If he can't run this in 20 minutes I'll refund." (High confidence because the UI actually is simple.)
- **Sweet spot:** shops on Enterprise Road, Landhies Road, Kariokor, Kariobangi light industries, Ruaraka. KES 1M-5M/month, 3-8 contractor accounts, physical premises with a counter.
- **First-customer target:** 1 in Week 3, expand in Month 2 (long sales cycle — these owners buy in person, not on WhatsApp)

The commercial offer (same across all modules)

Price: KES 30,000 one-time per module.

Launch offer (first 10 customers per module): KES 15,000 (50% off). Payable to Paystack via M-Pesa STK OR to your Till + admin captures the M-Pesa code. **Free install by Justine personally** that same week.

Why this offer closes:

- **Free install** removes the biggest fear (setup + trust). You show up in person.
- **Half price for first 10** = real urgency (you can only install 10 solo per module per month). Not a lie.
- **No monthly fees ever.** The single strongest differentiator vs Loyverse, Sokoni, Vend.
- **KRA eTIMS included.** Owners are terrified of KRA fines from March 2026 audits.

The 30-day plan

Which module to attack when

Order matters. Do NOT try to sell all four modules at once — you'll dilute your pitch and confuse yourself.

Week	Primary module	Secondary	Why
1	**Dawa**	—	Strongest fear-driven pitch (KRA + SHA), highest willingness-to-pay, best differentiation vs incumbents
2	**Dawa**	**Retail**	Ride week 1 momentum + testimonials; add retail for volume
3	**Retail**	**Hospitality**	Retail cycle is fast; hospitality demos require between-service timing
4	**Hospitality**	**Hardware** (in person)	Hardware needs walk-in demos — save for when you have testimonials from all three other modules

Total target after 30 days: **10 Dawa + 8 Retail + 3 Hospitality + 2 Hardware = 23 paying customers.** At blended KES 15k avg = **KES 345,000 gross.**

Week 1 — Dawa launch (goal: 2 paying pharmacies)

Monday

1. Atlas !' Prospector!"**pharmacies Nairobi CBD**" !' import 50 as companies. Tag#dawa, #week1.
2. Draft **Dawa voice note** (see script above). Record it. Listen. Re-record until it sounds like you, not a script.
3. Send **20 voice notes** before lunch. Do not wait for perfect.
4. Reply to every response within 2 hours.

Tuesday–Wednesday

3 pharmacy demos for Thursday.

6. Rehearse the pharmacy demo: ring **MS Control Number Stamps on receipt** !' dispense prescription **amber batch-expiry toast**. Under 3 minutes.
7. Pack the demo bag: laptop, thermal printer, USB scanner, M-Pesa Till number, license keys pre-generated for Dawa.

Thursday — install day

8. Do the 3 pharmacy demos. Install on-the-spot for anyone who says yes.
9. Take KES 15,000 via M-Pesa `/admin/licenses/[id]/mark-paid` to record.
10. Get their permission for a photo + 15-second video testimonial while Omnix is live on their counter.

Friday

11. Post yesterday's install on WhatsApp Status. Tag **the pharmacy name** if they allowed it.
12. Send 20 more Dawa voice notes.

Weekend

13. Follow up week-1 non-repliers via Atlas Campaigns (WhatsApp drip #2).

Week 1 target: 2 paying pharmacies. KES 30,000 gross.

Week 2 — Dawa expands + Retail begins (goal: 3 more Dawa, 2 Retail)**Monday**

1. Atlas Prospector: pull another 50 pharmacies — **Mombasa / Kisumu / Nakuru** if possible; otherwise Westlands / Kilimani / Karen.
2. Send 30 more Dawa voice notes (with the video testimonial from Week 1 attached).
3. Same day: pull **50 retail shops** in Nairobi CBD via Prospector query "shops Nairobi CBD" or "mini-marts Nairobi CBD".
4. Draft the **Retail voice note** (see script above).
5. Send 20 Retail voice notes.

Tuesday–Wednesday

3 pharmacy demos + 2 retail demos for Thursday.

Thursday

7. Morning: pharmacy demos (you're now on your 3rd of these — you can do it in your sleep).
8. Afternoon: retail demos. Different pitch, same product logic. Show the close-shift screen (Retail's killer moment).
9. Install anyone who says yes.

Friday

10. Identify **reseller candidate**. Someone who talks to shop owners daily — a pharmacy distributor rep, a soft-drink route salesperson, an M-Pesa agent, or a friend who runs an IT support shop.
11. Offer **25% commission** per sale. Sign them via `/admin/users/[id]` !' promote to reseller.

12. Send them the welcome kit: pitch script, screenshots, referral link, WhatsApp templates for both Dawa + Retail.

Weekend

13. Post the second batch of install photos + testimonials.

14. Send a "only 6 half-price slots left" urgency nudge to non-responders.

Week 2 target: 3 more Dawa + 2 Retail = 5 more customers. KES 75,000 gross. Running total: 7 customers, KES 105,000.

Week 3 — Retail scales, Hospitality opens, Hardware begins (goal: 6 Retail, 2 Hospitality, 1 Hardware)

Monday

1. Reseller now has 3-5 leads from their own network. Support them: 15-min video call to answer product questions.

2. You focus on **retail walk-ins in Nairobi CBD** — walk into 20 mini-marts with your laptop between 10am and 2pm (owners are usually at the counter).

Tuesday

3. Atlas Prospects **30 restaurants + bars** — query "restaurants Nairobi", "bars Nairobi", "hotels Nairobi Westlands".

Hospitality voice note (see script above)

5. Send 20 hospitality voice notes.

6. Timing matters: restaurants respond best between 3pm-5pm (between lunch and dinner service).

Wednesday

7. Atlas Prospects **15 hardware stores** — query "hardware Nairobi", "hardware Enterprise Road", "hardware Landhies".

fewer, more targeted voice notes. And plan to visit in person for the demo. Hardware owners buy face-to-face.

Thursday–Friday

9. Do the demos: 2 restaurants + 1 hardware store + any retail from Monday's walk-ins.

10. Ask every existing referral to offer KES 5,000 off their next maintenance for each referral who buys.

Weekend

11. Post to Facebook groups: "Kenya Pharmacists", "Nairobi Restaurant Owners", "Hardware Owners Kenya", "Kenya Shop Owners". **Not "buy my software"** — share the free "How to file eTIMS in 5 minutes" video guide. Attracts owners; conversation opens naturally in comments.

Week 3 target: 6 Retail + 2 Hospitality + 1 Hardware = 9 more customers. KES 135,000 gross. Running total: 16 customers, KES 240,000.

Week 4 — Compound + scale (goal: 4 mixed, close month at 20+)

Monday

1. Reseller now has their own referrals compounding. Their pipeline is ~10 open, closing 4-6. You're less involved.

2. You focus on **the highest-value verticals**:

- Restaurant chains (2-3 locations from the same owner)
- Hardware stores near where you've already installed a pharmacy (referral density)

Tuesday

3. Email one distributor rep (pharmacy or cement — the ones who visit every shop weekly) offering commission demo for their whole network. This is a longer play; plant the seed in Month 1, harvest in Month 2.

Wednesday–Thursday

Walk-in day: Kikuyu / Kiambu / Thika Road — different geography, different competition. Retail focus.

5. Existing customers (weeks 1-3): check in, verify working well, ask for one referral each.

Friday

First month wrap-up: post totals + testimonials on X/LinkedIn/Facebook. This "we're real, we have 20 customers" post unlocks the next wave.

Weekend

7. **Caspi study** from your best week-1 pharmacy — a 1-page PDF ("How Sokoro Chemist saved KES 40,000 in month 1 with Omnix"). This becomes your Month 2 marketing artifact.

Week 4 target: 4-6 more customers. Running total: 20-23 customers. KES 300,000-345,000 gross.

The math, per module

Real Kenyan cold-outreach conversion, tuned per vertical:

Module	1 outreach cycle !' replies	Replies !' demos	Demos !' paid	Expected paid per 200 outreach
Dawa	20-30% (KRA hook is strong)	30-40%	40-50%	8-15 customers
Retail	15-25% (crowded market)	20-30%	25-35%	4-9 customers
Hospitality	20-30% (higher intent)	30-40%	35-45%	6-12 customers
Hardware	10-15% (WhatsApp weak for this crowd)	40-60% (in-person converts hard)	40-50%	3-7 customers

Dawa + Hospitality are your highest ROI per message. Retail is volume. Hardware is high-value but slow — plant seeds now, close in Month 2.

The commercial

goals

At blended KES
15k per customer
(launch pricing),
first-month targets:

Milestone	Customers	Gross	Take-home after M-Pesa/ Paystack fees + petrol
Baseline (no reseller, weak follow-up)	8-12	KES 120k-180k	KES 90k-140k
Target (this plan, executed)	20-25	KES 300k-375k	KES 230k-290k
Stretch (reseller performs)	30-40	KES 450k-600k	KES 340k-460k

Month 2 flips: launch pricing ends after first 10 per module (40 customers gross). Price returns to KES 30,000. Reseller pipeline mature. Existing-customer referrals kick in. **Realistic Month 2 target: 30-50 customers at KES 25,000 blended = KES 750k-1.25M gross.**

The 12 things that must be true before Monday

Pre-flight checklist. Print it. Tick each.

- Live Paystack keys are in /admin/settings (not sandbox)
- Test buy: KES 100 test license via Paystack !' auto-activates within 30s
- M-Pesa Till registered + tested
- Manual M-Pesa admin flow tested end-to-end
- Post-payment email

arrives with license key
 + download link (test
 with your own email)

- Your WhatsApp Business number on the landing page footer
- Four voice-note openers recorded — one per module (Dawa / Retail / Hospitality / Hardware)
- Prospector queries prepared for all four modules
- Thermal printer + USB scanner + laptop packed
- KES 5,000 in petrol / matatu money for shop visits
- Weekend cleared
- One friend / family member briefed to receive incoming M-Pesa if you're on the road

Common objections — per module cheat sheet

Dawa (Pharmacy)

- **"Loyverse works" !'**
 "Does it sign eTIMS automatically? Handle SHA claims? Warn expiry? From March 2026 KRA is auditing — KES 10,000/day fine for missing receipts."
- **"Too expensive" !'**
 "You lose KES 15,000/ month on expired stock. This pays for itself in the first month."
- **"I need to ask my pharmacist son" !'**

"Bring him. If it takes him more than 30 minutes to learn, I'll refund."

Retail (Mini-marts, dukas, salons)

- **"I use Loyverse for free"** ! "Does it reconcile M-Pesa with cash sales at close of shift? Because you're losing KES 800/day right now and don't know where."

- **"My son runs the till"** ! "Perfect — bring him to the demo. He'll like it."

- **"I need to think"** ! "Sure. I'll leave it installed on 30-day trial. Use it Monday morning."

Hospitality (Restaurants, bars)

- **"We use paper KOT"** ! "How often do you lose orders? Once a week? That's KES 2,000 gone. This eliminates it."

- **"POS in Kenya is unreliable"** ! "That's exactly why I built this — works offline, syncs when internet returns."

- **"My chef won't use it"** ! "The chef sees a printer output — no clicks required. Same as the paper he has now, but automatic."

Hardware (Hardware stores)

- **"I don't need software mzee, I know my customers"** ! "Show me your quote book. When Kioko last bought

50 bags of cement —
what price did you
charge him? [Owner
flips through paper].
Software tells you in 2
seconds, forever."

- **"Too complicated" !'**

"45-minute setup. I do it.
Your son runs it. Try it for
30 days free."

- **"My competition
doesn't have it" !'**

"Exactly. When Kioko
compares your quote (2
min from you) vs. their
quote (10 min from
them), who wins?"

What NOT to do

- Do not build another
feature this month (Atlas
or Omnix)

- Do not try to sell all
four modules to the
same shop

- Do not offer more
than 50% off — protect
the price anchor

- Do not accept "I'll
pay next week" more
than once from the
same lead

- Do not attend startup
meetups (buyers aren't
there)

- Do not perfect the
landing page
(customers rarely read
past the hero)

- Do not spend >2
hours per install (30 min
setup + 15 min training
+ 15 min buffer, hard
cap)

- Do not mix module
scripts — a Dawa
opener to a restaurant
loses both

The single thing that matters

Send 20 WhatsApp voice notes before end of day today, all Dawa.

Not tomorrow. Not "after I refine the script." Today. 20 messages. Dawa vertical. Voice notes, not text.

Everything else in this plan compounds off that one action. If Monday ends with 0 messages sent, the plan didn't happen and no code change saves it.

If Monday ends with 20 sent, everything else — Week 2's retail expansion, Week 3's hospitality, Week 4's compounding — is downstream physics. The plan runs itself once the ball is rolling.
